

Protecting your family, home & business

Wireless security systems protect your home with award-winning two-way technology and a range of peripherals to suit any situation, while removing the hassle and disruption of running wires and cabling.

Battery monitoring/saving

Each wireless device is monitored and informs you of when to replace the battery before its life expires. Furthermore, each device conserves battery power by "sleeping" during periods when detection is not needed.

ProControl+

Monitor your home all year round with ProControl+. Integrate your intruder and camera systems like never before for quick and seamless operation.

User friendly programming

Whether you need to change codes, add tags, add keyfobs, check the logs, change time/date or walk test your system, each function can be easily located and programmed from the user-friendly menu.

Intelligent arming

The control panel recognises 'home' and 'away' modes and will set the system accordingly. For example if you were to set the alarm while in the house (home) and then walk out of the exit door, the system will register the action and automatically set the system to 'away'.

With no cabling or wires to run or hide, the security system can be installed with ease in new builds or existing houses with minimal disruption. It's even ideal for listed buildings, with our innovative wireless technology offering a smart and modern security solution with minimal fuss.

No Mess, No Fuss Just Excellent Performance

The award-winning two-way wireless control panel offers a wide range of security and safety peripherals to keep your home and family safe, such as motion detectors, shock sensors, smoke and carbon monoxide detectors. With its ability to sync with up to 64 wireless and a further 34 wired devices, you can easily add a multitude of devices, while its innovative wireless technology means the entire system can be fitted without having to redecorate after laying cables and wires.
