

CASE STUDY

Berryhill Village

Client

Midland Heart

Company Sector

Retirement Living

Services Provided

Fire Alarm & Fire Detection Systems

Client Brief

To provide a new BS5839 PT1 L1 & BS5839 PT6 LD1 Fire Alarm to Berryhill Village

Project Solution

As above designed to meet Midland Heart's Specification

Project Result

Delivered the design, installation and commissioning of the above systems with minimal disruption to the already occupied property, whilst working around the continual essential care functions

Project Duration

Initially 6 weeks for the install with several stops for Covid (10 installers on site for most of that period)

Value of Project

£224,455.76

“ We found the entire process of the fire alarm install a breeze from start to finish. The engineers on-site were thorough with their work and it was evident that they knew their stuff with not only the old system, but also the one they were installing. We were kept up to date for each step of the install so we knew what area they were working in and what we needed to do on-site to support with the install. The guys were also very friendly, polite and prompt – arrived early and made sure to leave things tidy before they left. We found that having a kitchen well stocked with breakfast items for them surely helped – you can't have them working on an empty stomach!

Gary Bell, Retirement Living Manager
