

CASE STUDY

Berryhill Village

Client

Midland Heart

Company Sector

Retirement Living

Services Provided

Emergency Lighting

Client Brief

Complete upgrade to LED lighting. Including Emergency Lighting to BS:5266 standard

Project Solution

Installation of intelligent motion dimmable fittings throughout corridors to provide energy savings and security for residents. The lights provide a low ambient lighting level 24/7 even when presence is not detected. Dimmable lights installed in the bar/restaurant area and main hall to enable different atmospheres to be created with ease. Colour changing LED strips have been installed in the restaurant, main hall and the village high street to create unique feature that truly complements the spaces

Project Result

Lighting installation delivered as per the design. Works carried out alongside other trades and contractors which posed additional challenges. Communication was key to this project to ensure proper co-ordination and minimise disruption to other work streams and the day-to-day running of the care home

Project Duration

17 Weeks

Value of Project

£281,250.66 + VAT

“ The lighting upgrade at the Village has been very successful from start through to the finish. The engineers on-site were very professional and did a thorough job staying in regular contact with us whilst on-site. The LED colour changing lighting has been a very welcomed change to the village and adds a touch of colour and ‘modernity’ to an otherwise ‘older building’. Feedback from the residents is that it looks ‘posh’ and very up to date!

Gary Bell, Retirement Living Manager
